CASH DRAWER
INTERFACES

Connectivity Solutions

Versatile and flexible, APG interfaces are able to connect to virtually every POS system and receipt printer on the market.

APG provides robust, easily connected interface options that compliment its durable cash drawers. APG strives to develop new connectivity solutions to satisfy the ever–changing environments of the Point–of–Sale (POS) market. Custom interfaces can be created to meet specific requirements.

APG CASH DRAWER®

The Recognized Leader

<superscript>OUR</superscript> INTERFACE OPTIONS

All APG board level products feature accessible diagnostic lights, making set–up and trouble–shooting easy.

USBPRO® INTERFACE

Description

USB HID Class Interface
Interface #554

The USBPro interface is a Plug and Play interface allowing the user more control over the operation of the cash drawer. Specific features and benefits include:

Ease of installation and service
· Powered by the USB bus, external power is not required.
· True Plug and Play connectivity.

Reliable operation
· Drivers allow seamless operation within your software.
· Troubleshooting and set-up is made easy with diagnostic lights.

Security
· Better application logging of system operation.
· USB interface prevents unauthorized devices from opening drawer.

SERIALPRO® INTERFACE

Description

SerialPRO II Interface #484A
Smart SerialPRO Interface #212A

Compatible with all popular software using a serial interface cash drawer, APG serial interfaces come in dedicated and programmable models. Both products include DIP switches and diagnostic lights to facilitate easy programming and quick installation.

The SerialPRO II Dedicated Serial Interface's unique design will maximize flexibility and eliminate unauthorized openings. An external power supply is not required in most applications, but is provided for those that do require it.

APG's most versatile interface for serial port applications, the **Smart SerialPRO** is fully programmable to ensure compatibility with all serial interface requirements. It also comes with a "Y" cable giving it the ability to share the serial port with other devices. DIP switches allow quick selection of the desired operating mode and drawer opening command. Helpful indicator lights illuminate to verify power and data received.

PARALLELPRO® INTERFACE

Description

ParallelPRO Interface
Interface #182

The APG ParallelPRO interface is designed to work with your computer to help create a point-of-sale system. DIP switches allow quick selection of the desired operating mode and drawer opening command. Helpful indicator lights illuminate to verify power and data received. A "Y" cable provided with every ParallelPRO allows sharing of the PC port with other devices.

MultiPRO® INTERFACE

Description

MultiPRO Interface #320 (24V)
MultiPRO II Interface #420 (12V)
MultiPRO III Interface #520 (12/24V)

The MultiPRO Interface

The APG MultiPRO interface is designed to take a standard cash drawer and connect, via interchangeable cables, to a variety of POS receipt printers and terminals. The detachable cable can be changed on-site allowing cash drawers fitted with the MultiPRO interface to adapt to a different terminal or printer. The MultiPRO 520 interface can be connected to devices ranging from 7 volts to 38 volts.
